

# ether-1

#Decentralize Everything

# What is Ether-1

Imagine a world where content is held completely in the public domain, hosted by the public and is 100% immutable. The idea of a completely decentralized, democratized and community hosted internet is no longer only a utopian dream but is now within reach of the Ether-1 project.

# Who is Behind Ether-1

**Ether-1** was originally started by James. The project's "Founding Fathers" including James, Treehouse and Fallen Gravity.

The project is currently led by the Ether-1 Council. This is done with the aim to achieving the **#DecentralizeEverything** goal Ether-1 is striving towards.

The core development team goes under the name "**Etho.Black**". Etho.Black's members/dev's are; James, Fallen Gravity, Dylie and Exlo. Etho.Black works closely together with "**Etho.Pink**" which is Ether-1's marketing team.

# Technicals

Genesis: 05/23-2018

Total Supply: Unlimited

Circulating Supply: 48,015,987

Block Time: 13 seconds

Halving Schedule: See *next slide*

Dev Fees: See *next slide*

Market Cap: 28 BTC (as of 11/20/2020)

Main Product: **ethoFS**

# Ether-1 Monetary Policy

Block Height	Mining Reward	Node Reward	Treasury Fund	Total Reward	Annual Rate of Inflation	Assuming 3% uncle rate
						Total ETHO in Circulation
0	10	2	1	13		0
1000000	8	2	1	11		13390000
2000000	6.4	2	1	9.4		24720000
2700000	5.6	2.8	1	9.4		31497400

20000000	0.3	0.55	0.15	1	3.67%	68021200

# The Problem

We all know that governments, banks, social media, websites,.. All are centralized. You don't own your own data. This is a no-go in our eyes, that's why we aim to **#DecentralizeEverything**.

We want users to safely store their files somewhere where they actually are THEIR files and THEIR websites. Not something controlled and monitored by "Big Brother".

# Our Solution

**ethoFS** combines the **Ether-1** Service/Master/Gateway Node Network with IPFS to deliver decentralized content on a scale not seen before. Users are able to upload content or a website via a simple UI which is decentrally hosted with ethoFS.

Ether-1's mission is to bring content hosting and use together to service the same people who also provide the service. ethoFS aims to be a content hosting platform that is usable by anyone and where everyone has a voice.

# Our Products

**ethoFS - Hosting Solution (In Production)**

**ethoPAY - Payment Solution (In Production)**

**Black Wallet & Cloud Contacts - Multi EVM Currency Mobile wallet (In Production)**

**Discord bot - Smart interactive multipurpose bot (In Production)**

**Ether-1 Node System - Node monitoring, payments and node control system (In Production)**

**Ether-1 Full Wallet Desktop - Ether-1 Wallet GUI with a Geth Client attached locally (In Production)**

**wETHO - Wrapped ETHO on the xDai chain (In Production)**

**Wrapped ETHO on the ETH chain (In Development)**

**Black Wallet (Desktop) & Cloud Contacts - Desktop version of Black wallet (In Development)**

**ETHO ChatBot - Interactive bot for the most common asked questions (In Production)**

**ETHO Staking Platform - Ether-1 Staking/Lending (In Production)**

# The Future

## High Priority

ethoFS Patch

wETHO

Deploy TokenBridge Oracle

Deploy TokenBridge Monitor

Deploy Tokenbridge UI (Swap wETHO to ETHO)

List wETHO on UniSwap

## Medium Priority

Ether-1 Mobile Wallet

Global Username Service

Desktop Version

Kepler Update

## Low Priority

Add New Coins

User Interface V2.0

ethoFS Mobile Integration

Recurring TXs

ethoFS Desktop Backups

## Long Term

Project D

# Ether-1 Roadmap

**BPSAA**

Bringing the power of decentralized storage and hosting to a solid group of projects within the BPSAA and to the world.

While expanding into other projects and cross chain solutions to provide security, flexibility, and growth.
